

Amendments to the Claims

This listing of claims will replace all prior listings of claims in the application.

Listing of Claims

1. (Original) A self-excited oscillation heat pipe charging working fluid in a fluid channel reciprocating multiple times between a heating portion and a cooling portion, wherein at least a part of a container constituting the fluid channel has flexibility and can be disposed at a portion which is deployable, foldable and deformable.
2. (Original) A self-excited oscillation heat pipe according to Claim 1, wherein at least a part of a conduit constituting the container of the self-excited oscillation heat pipe has a flexible shape.
3. (Original) A self-excited oscillation heat pipe according to Claim 2, wherein at least a part of a conduit constituting the container of the self-excited oscillation heat pipe has a coiled shape.
4. (Original) A self-excited oscillation heat pipe according to Claim 2, wherein at least a part of the conduit constituting the container of the self-excited oscillation heat pipe has a waved bent shape.
5. (Original) A self-excited oscillation heat pipe according to Claim 2, wherein at least a part of the conduit constituting the container of the self-excited oscillation heat pipe is formed of a bellows.
6. (Original) A self-excited oscillation heat pipe according to Claim 1, wherein at least a part of the container

of the self-excited oscillation heat pipe is constituted by a material having flexibility.

7. (Original) A self-excited oscillation heat pipe according to Claim 6, wherein at least a part of the container of the self-excited oscillation heat pipe is constituted by super elastic alloys or super elastic plastic alloys.

8. (Currently Amended) A self-excited oscillation heat pipe according to ~~any of Claims 2 to 7~~Claim 2, wherein at least a part of the conduit constituting the container of the self-excited oscillation heat pipe disposed on a heat transfer surface has flexibility.

9. (Original) A self-excited oscillation heat pipe according to Claim 8, wherein the heat transfer surface is formed inside clothing and the conduit is disposed inside the clothing.

10. (Currently Amended) A self-excited oscillation heat pipe according to ~~any of Claims 2 to 7~~Claim 2, wherein at least a part of the container of the self-excited oscillation heat pipe other than the container disposed on the heat transfer surface has flexibility.

11. (Original) A self-excited oscillation heat pipe according to Claim 10, wherein the self-excited oscillation heat pipe is disposed over a main unit of a spacecraft mounting electronic equipment thereon and a radiation surface connected to the main unit to be foldable in the main unit and deployable from the main unit.

12. (Original) A computer provided with a main unit having at least a CPU housed therein and a display unit foldably attached to the main unit, wherein a self-excited oscillation heat pipe having flexibility at least at a part of

a container is disposed over the main unit and a backside of the display unit.

13. (Original) A computer according to Claim 12, wherein the self-excited oscillation heat pipe has a flexible shape at least at a part of a conduit constituting the container.

14. (Original) A computer according to Claim 13, wherein the self-excited oscillation heat pipe has a coiled shape at least at a part of the conduit constituting the container.

15. (Original) A computer according to Claim 13, wherein the self-excited oscillation heat pipe has a waved bent shape at least at a part of the conduit constituting the container.

16. (Original) A computer according to Claim 13, wherein the self-excited oscillation heat pipe is formed of a bellows at least at a part of the conduit constituting the container.

17. (Original) A computer according to any of Claim 12, wherein at least a part of the container of the self-excited oscillation heat pipe is constituted by a material having flexibility.

18. (Original) A computer according to any of Claim 17, wherein at least a part of the container of the self-excited oscillation heat pipe is constituted by super elastic alloys or supper elastic plastic alloys.

19. (Currently Amended) A computer according to ~~any of~~ any of Claims 12 to 18 Claim 12, wherein a part of the container of the self-excited oscillation heat pipe is

connected to a CPU or a radiation member of the CPU in an excellent heat transfer state.

20. (Currently Amended) A computer according to ~~any of~~  
~~any of Claims 12 to 19~~Claim 12, wherein a fan is provided on  
the radiation surface provided on the backside of the display  
unit.
